Sneha Kulkarni

Machine Learning Engineer

Mumbai, Maharashtra | sneha.kulkarni@example.com | +91 70XXX XX815

OBJECTIVE

Machine learning engineer with about one and a half years of industry experience in NLP and classical ML. Looking for a data scientist role where I can work on the full model lifecycle, from data cleaning to deployment.

EDUCATION

B.Tech, Computer Engineering , Veermata Jijabai Technological Institute (VJTI), Mumbai, 2019 - 2023, CGPA 8.9/10

Relevant courses: Machine Learning, Data Mining, Probability and Statistics, Natural Language Processing, DBMS

EXPERIENCE

Machine Learning Engineer , Talkwise AI, Mumbai Aug 2023 - Present

- Building intent classification models for a customer support chatbot in English and Hinglish. Started with a TF-IDF + logistic regression baseline, then fine-tuned DistilBERT in TensorFlow/Keras, which took macro F1 from 0.74 to 0.86.
- Wrote data cleaning scripts in pandas for chat transcripts: masking personal details, normalising Hinglish spellings and removing duplicates.
- Built an FAQ search using sentence embeddings and cosine similarity. It is used as a fallback when the intent model is not confident.
- Track experiments in MLflow and write a short evaluation note (confusion matrix, error examples) for every model release.
- Package models with FastAPI and Docker for the backend team.

Data Science Intern , Ridgeway Insurance Brokers, Mumbai Jan 2023 - Jun 2023

- Built a claim fraud classification model with random forest and gradient boosting in scikit-learn. Handled class imbalance with SMOTE and class weights.
- Did feature engineering on claim history and policy data and explained the model to the claims team using SHAP plots.
- Wrote SQL queries to pull claims data from MySQL.

PROJECTS

Fake News Detection (final year project) - Compared Naive Bayes, logistic regression and an LSTM on a Kaggle news dataset. The LSTM had the best recall. Built a small Streamlit demo for the viva.

Mumbai AQI Forecasting - Regression with weather and traffic features. Mostly learnt how to split train and test data correctly for time series.

Movie Recommender - Collaborative filtering on the MovieLens dataset using NumPy and the Surprise library.

SKILLS

Programming: Python, SQL, C++ (for DSA)

Libraries: pandas, NumPy, scikit-learn, TensorFlow, Keras, Hugging Face Transformers, NLTK, Matplotlib, Seaborn

Concepts: classification, regression, clustering, feature engineering, model evaluation, NLP, deep learning

Tools: Git, Docker, MLflow, FastAPI, Streamlit, Google Colab

ACHIEVEMENTS AND ACTIVITIES

- Top 10% in a Kaggle Playground competition (tabular classification), 2022.
- Core member of the VJTI Data Science Club. Took a pandas workshop for first-year students.
- Smart India Hackathon 2022 finalist.

LANGUAGES

English, Marathi, Hindi
